

Case Study: E-commerce Platform

Background:

- **Organization:** A top e-commerce platform offering a wide range of products.
- **Industry:** E-commerce
- **Number of Employees:** 2,000+
- **Users:** 1.2 million+ active users

Overview: The platform had faced multiple cyber-attacks, including DDoS attacks and data breaches. Concerned about user trust and potential financial losses, they sought a comprehensive cybersecurity assessment.

Assessment Process: Grab The Axe's team conducted penetration testing, vulnerability assessments, and reviewed the platform's security infrastructure.

Recommendations Implemented:

- Enhanced firewall and intrusion detection systems.
- Implemented multi-factor authentication for user accounts.
- Regularly updated and patched software vulnerabilities.
- Conducted cybersecurity training for employees.

Results: Post-implementation, the platform witnessed a significant reduction in cyber incidents, ensuring a secure shopping environment for users and safeguarding sensitive user data.
